

# Technical Account Review

Portfolio simulation · Technical Account Management

## Portfolio status

Fictional account created to demonstrate how I would structure a technical account review.

## Customer context

A workflow automation SaaS customer wants to expand from one operations team to three departments.

## Signals

Core usage is active but advanced automation is low; repeated permissions/integration questions exist; department-lead engagement is limited; sentiment is positive but cautious.

## Action plan

- Technical enablement session for permissions and integrations
- Department-level adoption milestones
- Stakeholder alignment around outcomes
- Documented owners, blockers and next review date

## Success

Broader adoption, fewer repeat configuration questions, stronger stakeholder engagement and an evidence-based path to expansion.
