

Three-Tier Banking Application on AWS

Real project · Cloud & DevOps

Project status

Real team capstone. I contributed as a member of a 16-person engineering team; this was not an individual build.

Architecture

Three-tier banking application delivered on Amazon EKS with Terraform-managed infrastructure, Docker containers, GitHub Actions and Argo CD.

Supporting work

- AWS VPC and networking
- EC2 and IAM concepts
- Amazon ECR
- Route 53 and CloudFront
- Secure credential and deployment practices
- Monitoring, logging and documentation

Team delivery

Worked collaboratively with Jira, GitHub and Notion in an Agile environment, including planning, peer review, technical walkthroughs and documentation.
